PREFACE

This book is prepared in accordance with the **College Physical Education 1 – PHYSICAL ACTIVITY TOWARDS HEALTH AND FITNESS (PATH FIT 1) Movement Competency**. It provides physical activities for the purpose of optimizing health and fitness.

This book contains various activities that the students can perform based on their fitness goals and wellness. Activities were chosen in a way that it will fit with students' capabilities which will eventually lead towards their holistic development, the major goal of the subject.

Knowledge of the body, the nutritional needs, the proper movements that provide training in different movement patterns, and core engagement in conjunction with principles of healthy eating and physically active lifestyles are among the important information in this book.

This book also aims to develop the exercises' performance accompanied by the music and actual training exercise with different body movements in a practical activity, so that the student will learn the fundamental knowledge on how the body reacts and adapts physically.

As the first book in College Physical Education, this book is divided into five chapters. Definitely, it will always start with the **1. Concepts of Physical Education, 2. Movement Education, 3. Physical Fitness, 4. Nutrition, 5. Movement Training**. These topics are all geared towards the development of the students in all aspects, Physically, Emotionally, Mentally, Socially, and Spiritually (PEMSS) in the performance of properly selected physical activities.

The Authors

PREFACE

DEDICATION

*This book is heartily dedicated to all who will use it
and to the author's family.*

To God be the glory.

TABLE OF CONTENTS

Unit III.	PHYSICAL FITNESS	47
Unit IV.	NUTRITION AND HEALTHY EATING HABITS	69
Unit V.	MOVEMENT TRAINING	87
BIBLIOGRAPHY		111

Unit I

PHYSICAL EDUCATION

Introduction

Physical Education as a subject in the curriculum has historically been neglected and faced numerous setbacks due to misunderstandings among teachers and administrators who may not have had sufficient exposure to its principles. Therefore, it is imperative to redefine and clarify the scope of this subject area to ensure it receives the attention it deserves within the educational framework.

In this context, students enrolled in **PATH-FIT 1 (Physical Activity Towards Health and Fitness - MOVEMENT COMPETENCY-BASED TRAINING)** will gain a deeper understanding of Physical Education and its curriculum coverage. There is widespread consensus that optimal health is invaluable; as the German philosopher Schopenhauer wisely noted, “the greatest of follies is to neglect one’s health for any advantage in life.”

General Objectives:

At the end of the unit, the students are expected to:

- Improve understanding about the principles and importance of Physical Education to ensure it is valued and prioritized within the educational curriculum;
- Redefine and clarify the scope of Physical Education to ensure comprehensive coverage and integration within the overall educational framework;
- Foster the holistic development by incorporating Physical Education to enhance physical fitness, mental resilience, emotional stability, and social skills;

- Participate actively in the discussion and activities to understand the significance of physical exercise for maintaining optimal health and well-being, emphasizing the need for regular physical activity across all age groups; and
- Equip themselves with essential life skills such as teamwork, discipline, and problem-solving through active participation in Physical Education, preparing them for productive and healthy lives.

Physical Education: Definition, Goals, Objectives, and Functions

Physical Education in Philippine schools has experienced many vicissitudes and significant changes over time. Historically, Physical Education was viewed primarily as the education of the physical body, where a muscular physique was considered the hallmark of a physically educated individual. Activities during this era were termed "*drill*," "*physical training*," and "*calisthenics*," focusing on muscle strengthening.

In contrast, contemporary perspectives on Physical Education emphasize education through physical activities. This modern approach, often described as "*education through movement*," shifts the focus from mere physical fitness to holistic development through physical activities. Wunderlich (1967) outlines the benefits of movement in education:

1. It provides sensory data.
2. It broadens the perspective horizon.
3. It stimulates the function and structure of all bodily organs.
4. It enables individuals to learn about themselves in relation to their surrounding environment.

"**Education through movement**" involves utilizing a culturally rich array of activities and processes— such as *games*, *dance*, *gymnastics*, *athletic sports*, and *outdoor pursuits*— as mediums through which teachers can achieve desirable educational outcomes. This approach underscores the concept of "learn to

move, move to learn," highlighting that individuals must master movement to facilitate learning and acquire necessary knowledge through physical activities.

Additionally, modern Physical Education in the Philippines aims to develop various competencies beyond physical fitness, including *social skills, teamwork, leadership, and emotional well-being*. This holistic approach prepares students not only for a physically active lifestyle but also equips them with life skills essential for personal and social development.

Physical Education

Physical education is a vital component of the educational program, aimed at fostering the optimal development of individuals physically, socially, emotionally, and mentally through engaging in well-chosen physical activities (Andin, 2002). It focuses on the teaching and learning of skills and attitudes through play activities. This aspect of education can be aptly described as education through physical exertion.

Legal Bases for teaching Physical Education in the Philippines

- 1901** Physical exercise became part of public school subjects, with regular athletic programs.
- 1920** Physical Education subject became mandatory in all public schools.
- 1937** Physical Education became a formal subject in secondary school curricula.
- 1969** The School of Physical Education and Sports Development Act of 1969. A program of activities included among others:
 - a. A program of health education and nutrition;
 - b. A program of physical fitness for all pupils;
 - c. A program of competitive athletics;
 - d. A program of intramurals and inter-unit athletic completion within schools, districts, and provinces.

- e. An annual athletic competition within and among regions.

1982 MAPE was introduced, and the learning area involves music, arts, and physical education.
(Foundation of Physical Education by Carmen Andin)

Article 1 of the International Charter of Physical Education and Sports, UNESCO, Paris (1975) and Recommendation 1, Interdisciplinary Regional Meeting of Experts in Physical Education and Sports, UNESCO, Brisbane (1982).

1.1. Every human being has a fundamental right of access to physical education and sport, which are essential for the full development of his personality. The freedom to develop physical, intellectual, and moral powers through physical education and sport must be guaranteed both within the educational system and in other aspects of social life.

Article XIV Section 19 (1) & (2) of the 1987 Philippine Constitution mandates that:

- 1. The state shall promote physical education and encourage sports programs, league competitions, and amateur sports, including training for international competitions, to foster self-discipline, teamwork, and excellence for the development of a healthy and alert citizenry.*
- 2. All educational institutions shall undertake regular sports activities throughout the country in cooperation with athletic clubs and other sectors.*

Functions of Physical Education

Physical Education performs three functions:

- 1. Biological Function:** This aspect of physical education enhances individuals' growth and development by promoting healthy body movement patterns. It supports physical health and well-being, aiding in the development of motor skills, coordination, and overall fitness.

2. **Integrative Function:** Physical education plays a crucial role in integrating personality traits through participation in diverse and well-chosen physical activities. It fosters self-discipline, resilience, teamwork, and critical thinking skills, contributing to holistic personal development.
3. **Social Function:** Beyond individual benefits, physical education serves a societal role by transmitting essential values and standards. It promotes cooperation, respect, and inclusivity, aligning with societal needs and ideals. Additionally, it cultivates leadership qualities and fosters a sense of community and belonging among participants.

Physical Education, defined as education that utilizes movement, is fundamentally a critical aspect of the educational process. Its core purpose is to enhance and complement individuals by utilizing carefully selected and professionally guided physical activities. Through structured exercises, games, and sports, Physical Education promotes physical fitness, motor skill development, teamwork, and overall well-being. It plays a pivotal role in fostering lifelong habits of health and fitness, while also nurturing social skills, discipline, and resilience. Ultimately, Physical Education serves as a cornerstone in the holistic development of individuals, preparing them to lead active, balanced lives and contribute positively to society.

Fitness - A Major Goal of Physical Education

The concept of fitness varies among individuals, it encompasses physical, social, emotional, and mental well-being. From this viewpoint, **FITNESS** can be defined as the ability to lead a healthy, fulfilling, and purposeful life — a life often referred to by educational philosophers as the “good life,” which represents the ultimate goal of education.

Living the “good life” entails meeting basic needs such as physical well-being, love, security, and self-respect. It involves harmonious relationships with others, a genuine interest in their well-being, and a commitment to serving humanity with integrity and ethical standards. Through secure connections and a positive

outlook on the future, individuals can lead fulfilling and impactful lives.

As an integral part of the educational system, Physical Education aims to foster the holistic development of individuals, enabling them to attain total fitness and thereby embrace the "good life". It serves as a catalyst for achieving physical health, emotional resilience, social competence, and mental acuity. By promoting regular physical activity, sportsmanship, teamwork, and self-discipline, Physical Education equips individuals with the tools needed to thrive personally and contribute positively to society.

Therefore, at its core, a primary goal of Physical Education is to develop FITNESS — a state of well-being that empowers individuals to lead enriched, meaningful lives characterized by health, happiness, and a deep-seated commitment to the common good.

Objectives of Physical Education

The following objectives of Physical Education are described in relation to how they help with education outcomes and the curriculum.

A. Physical Development

Physical Education activities, carefully selected and actively participated in, contribute significantly to the maintenance of good health and the enhancement of physical fitness. Regular engagement in physical activities helps individuals build and sustain physical skills, thereby improving overall growth and development (NASPE, 2007). For instance, participation in sports and exercises improves cardiovascular health, muscular strength, flexibility, and endurance, leading to better overall physical well-being.

B. Social Development

Participation in Physical Education activities foster the development of essential social skills necessary for effective interaction in various social settings. It provides opportunities for individuals to cultivate traits such as friendliness,

cooperation, respect for others' rights, and good sportsmanship (Gallahue & Ozmun, 2012). Moreover, activities like team sports promote teamwork, leadership, and followership skills, contributing to the development of well-rounded individuals capable of contributing positively to society.

C. Emotional Development

Physical activities offer a platform for self-expression and emotional regulation. Engaging in physical activities helps individuals develop emotional traits such as self-confidence, self-control, self-reliance, courage, and determination (Graham, Holt/Hale, & Parker, 2013). Overcoming challenges in physical activities builds resilience and perseverance, essential for navigating life's challenges with confidence.

D. Mental Development

Participation in Physical Education activities enhance mental capacities through various cognitive processes. Individuals learn the mechanical principles underlying movements, gain knowledge of game rules and strategies, and explore ways to improve movement techniques in gymnastics and dance (NASPE, 2007). Moreover, engagement in sports and physical activities stimulates critical thinking and decision-making skills, as individuals strategize and adapt their actions according to rules and game situations (Gallahue & Ozmun, 2012).

The objective of Physical Education aims not only to enhance physical fitness but also to develop social skills, motor skills, aesthetic appreciation, cultural preservation, and environmental conservation.

1. **Knowledge:** It enhances critical thinking about how activities are performed according to rules, regulations, and strategies.
2. **Physical Fitness:** It helps improve and maintain an individual's ability to handle physical tasks without excessive fatigue, ensuring they have the energy to deal with other life challenges.
3. **Social:** It helps individuals understand themselves better and build good relationships with others, leading to more effective living.

4. **Motor Skills:** It involves learning the basic skills needed to participate in sports and games.
5. **Aesthetic:** It relates to the appreciation of what is pleasing to the senses.
6. **Nationalism:** It involves preserving cultural heritage by reviving traditional games, dances, and sports.
7. **Conservation:** It focuses on protecting the natural environment, such as forests and aquatic resources.

New Directions for Physical Education

In 2021, the Commission on Higher Education (CHED) in the Philippines issued CHED Memorandum Orders (CMO) No. 39 and No. 40, which mark significant advancements in the Tertiary Physical Education Curriculum.

These CMOs are designed to enhance the quality and relevance of physical education in higher education institutions, reflecting a modernized approach that integrates contemporary educational standards and practices. CMO 39 focuses on the policies, standards, and guidelines for the Bachelor of Physical Education program, ensuring a comprehensive and competency-based curriculum. Meanwhile, CMO 40 establishes the guidelines for the teaching of Physical Education in the general education curriculum, emphasizing the promotion of physical literacy, wellness, and lifelong fitness among students.

These memoranda aim to cultivate a more holistic and dynamic physical education framework, preparing students for diverse career opportunities and fostering a healthier society.

Physical Education Curriculum Map

Course Code	Course Title	Units
PE 1- PATHFit 1	Movement Competency-Based Training (MCT)	2
PE 2- PATHFit 2	Exercise-Based Fitness Activities	2

PE 3- PATHFit 3	Choice of Dance, Sports, Martial Arts, Group Exercise, Outdoor and Adventure Activities	2
PE 4- PATHFit 4	Choice of Dance, Sports, Martial Arts, Group Exercise, Outdoor and Adventure Activities	2

*CHED CMO 39 and 40 s 2021

Context of Physical Education

In 2010, the World Health Organization (WHO) released a seminal report highlighting a concerning trend: physical inactivity had emerged as the fourth leading risk factor for global mortality. This groundbreaking revelation underscored a critical health issue affecting populations worldwide.

The WHO report drew attention to the profound impact of sedentary lifestyles on public health, linking insufficient physical activity to a range of serious health consequences. It emphasized that physical inactivity contributes significantly to the global burden of non-communicable diseases (NCDs) such as cardiovascular diseases, diabetes, and certain cancers.

Inadequate physical activity levels were prevalent across all age groups and regions, with urbanization, technological advancements, and changes in transportation and occupational patterns often cited as contributing factors. These societal shifts had led to reduced opportunities for regular physical activity, exacerbating health risks on a global scale.

To combat physical inactivity and its associated health risks, WHO has outlined specific recommendations for exercise tailored to different age groups:

Children (5-17 years):

Kids and teenagers should get at least 60 minutes of moderate to vigorous physical activity every day. This can include activities like running or swimming for aerobic exercise, climbing or gymnastics for muscle strengthening, and jumping or skipping for bone health.

Adults (18-64 years):

Adults should aim for at least 150 minutes of moderate-intensity aerobic exercise each week, like brisk walking or cycling. Alternatively, they can do 75 minutes of vigorous-intensity activities, like running or aerobic dancing, or a mix of both. In addition, adults should include muscle-strengthening exercises, such as weightlifting or bodyweight exercises, on two or more days a week.

Older Adults (65 years and above):

Seniors with good mobility should focus on activities that help maintain or improve their balance, especially if they are prone to falls. They should engage in exercises that include endurance, strength, balance, and flexibility components. Activities like walking, yoga, and light weightlifting can be beneficial.

Role of Physical Education in Implementing Recommendations

PE in schools and communities plays a vital role in promoting regular physical activity from an early age and across the lifespan:

1. **Education and Awareness:** PE classes educate students about the importance of physical activity, its benefits, and the risks of inactivity, instilling lifelong habits of exercise.
2. **Skill Development:** PE teaches fundamental movement skills and sports-specific skills, preparing students to engage in various physical activities confidently.
3. **Promotion of Active Lifestyles:** PE programs promote active living through structured physical activities, games, and sports, encouraging students to meet WHO's exercise recommendations.

Purposes of Physical Education

1. **Physical Fitness and Health:** To help individuals achieve optimal physical fitness and health, allowing them to live a fulfilling life and contribute effectively to society's goals.
2. **Economic Contribution:** To prepare individuals to contribute to the economy by:
 - a. Improving work habits and attitudes like punctuality, cooperation, reliability, precision, accuracy, and open-mindedness.
 - b. Emphasizing critical thinking skills so they can identify problems accurately and master skills useful in the business world.
3. **Leadership and Morality:** To train leaders with high moral integrity and develop traits necessary for effective group participation, essential for society by:
 - a. Instilling a strong value system that helps individuals make moral decisions in daily life.
 - b. Encouraging group participation through activities like intramural sports, play days, and sports festivals.
4. **Creativity and Innovation:** To foster creativity and innovation inspired by faith in God, love of country, and care for fellow humans.
5. **Cultural Appreciation and Unity:** To instill a love and pride for one's own culture and develop an understanding and appreciation for other cultures, promoting international brotherhood and unity.
